Interfaces

SOCIAL — Forms | Actions | Collaboration

PROCESS — Rules | Events | Monitoring

DATA — Content | Integration | Analytics

Hosting — Cloud | Hybrid | On-Premise

Appian leads in the number of implementations that combine social, mobile and cloud, and has a reputation for requiring fewer consulting resources and less time to deploy compared with other offerings in the iBPMS market.

– Gartner Magic Quadrant for Intelligent Business Process management Suites 2014

## KEY FEATURES FOR MAXIMIZE BUSINESS BENEFITS

Social Collaboration – Combine and monitor key business events from systems with user posts in Appian's interface to drive process participation, effective collaboration, and faster action.

Native Mobility – Access news, tasks, and actions, and collaborate on today's leading mobile devices with no additional development or maintenance costs for mobile apps.

Real-Time Process Intelligence – Stream real-time data to reports, dashboards, and event feeds in context with business rules to deliver insights and prompt actions.

Rapid Application Development – Enable rapid time-to-value for Appian applications with simple BPMN modeling, collaborative design, a repository of reusable components, and fast one-click deployment.

Flexible Deployment Models – Start with low-risk Cloud BPM deployments or choose on-premise installations, with full portability of solutions between these two options.

MILLIONS USE APPIAN
